SUMMARY

Human-centered Product Designer (UX/UI) with **6+ years** of experience on web and mobile products: enterprise SaaS, complex platforms, websites and consumer apps. At Mercado Libre I design for Fury, the internal developer platform used by **15,000+ engineers**, which is now also offered to other companies. Before that I was the only product designer on Diligent's Policy Manager, a governance and compliance platform used by Salesforce and Cisco. I redesigned the whole platform, and my research led to separate roles for people who only needed to review. I use generative AI for rapid prototyping and work day to day with the engineers who build what I design.

CORE STRENGTHS

- **Complex Information Architecture:** dense technical data (PaaS resources, logs, compliance) made clear.
- **User Research:** interviews, personas, mental models, usability testing, card sorting, heuristic evaluation.
- **Scalable Design Systems:** Andes and Scotia at Mercado Libre, a Lens-based system at Diligent.
- **AI-Powered UX:** GenAI agents and AI workflows for discovery synthesis and rapid prototyping.
- **Cross-Functional Delivery:** MVP trade-offs with engineers and PMs; prototypes as the source of truth.

PROFESSIONAL EXPERIENCE

Mercado Libre

Sep 2024 – Present

Product Designer, Fury Internal Developer Platform

Member of the design team for Fury. Mercado Libre's **15,000+ engineers** use it to create, deploy and monitor **30,000+ microservices** behind Marketplace, Mercado Pago, Mercado Envíos and Mercado Ads.

- Handle UX improvements, new features and UI fixes that developer squads request and the design manager triages. Work each one with the engineers who own the feature, from ticket to design QA and release.
- Owned the UX of deployment pipelines and execution tracking. The screens translate PaaS complexity (YAML, CI/CD status, logs, CPU metrics) for platform experts and for business users new to Fury.
- Helped adapt Andes, Mercado Libre's e-commerce design system, into **Scotia**, a Fury-specific system for high-density data such as logs, metrics and resource tables.
- Worked on the modular version of Fury for external companies, which subscribe to the features they need instead of the whole platform. New B2B clients adopted it quickly.
- Integrated GenAI agents (Gemini) into discovery to synthesize long technical RFCs, and used AI workflows for rapid prototyping. Design alignment time dropped by **30%**.
- Negotiated MVP vs. ideal-state trade-offs with engineering squads so features shipped on time without piling up design debt.

Diligent (Contract via Improving)

Oct 2022 – Sep 2024

Sole Product Designer, Policy Manager

Diligent's governance and compliance platform, used by Salesforce, Cisco and large US school districts. Newly acquired, it crashed often and its largest clients were ready to leave. They later signed **long-term renewals**.

- Redesigned the **entire platform** and assembled its local design system, mostly from components of Lens, Diligent's new design system. Engineering teams in India built from my interactive prototypes, and development velocity **doubled**.
- Designed a human-centered error handling system: a standard error library and plain-language messages written with a UX writer. Crash-related support tickets came under control while engineering fixed the backend.
- Researched how people used the platform: many only needed to review, but there were no roles and everyone got the full editor. Defined roles with the team and designed a simpler review experience.
- Replaced a rigid review wizard with tabs, so reviewers move freely between draft, history and references.
- Championed and designed Word and Google Docs import and sync, meeting authors where they already worked while versions and audit trail stayed in Policy Manager.
- Audited error, empty and 404 states across Diligent's product suite, defined a shared standard and contributed the components to the central design system.

- Designed Subscriber Management for partners that publish policies to school districts, and PDF exports that mark changes between versions for audits.

Loopstudio

Feb 2021 – Oct 2022

UX Designer

UX consultant for clients in the USA, Portugal and Canada, working with the agency's design leads.

- Designed the end-to-end UX/UI of **Conduit**, a cloud SaaS where productions for studios like Netflix, HBO and Starz manage purchase orders, payment requests and approvals they used to run over email and spreadsheets.
- Designed an approval matrix for approval chains and spending limits, cost report dashboards, and pre-audit checks that flag miscoded submissions and missing files. Each studio can apply its own branding.
- Designed the Vendor Dashboard for SFR3, a PropTech SaaS. Its summary row condensed complex financial data and reduced payment-related support calls.
- Led the rebranding of Propelify, TechUnited's innovation festival in New Jersey, with a system used for **3+ years**.
- Redesigned the website of Edge226, an AdTech platform: copy, branding, information architecture and visual design.

QK Studio

Jan 2019 – Feb 2021

UX/UI Designer

First agency role. Designed digital products for regional enterprise clients such as Edelpap, Loma Negra and Bagó.

- Redesigned the customer virtual office of **Edelpap**, an electricity provider, as a mobile app with Figma and AI tools, based on heatmaps, card sorting with 39 participants (Optimal Workshop) and heuristic evaluation.
- Cut the main menu from 11 items to 4 and made paying the bill the main action. In usability tests, time to pay fell from **2 min to 40 s** and payment success rose from **40% to 65%**.
- Set up automated batch processing to generate assets for Pisopak, which cut manual production time by **90%**.
- Created a storytelling-first portfolio format that became the agency standard, and pushed for a more modern visual style that influenced its later rebrand.

Independent UX/UI Designer

Feb 2018 – Feb 2021

Freelance

- Designed websites, branding and animations for small businesses and independent clients, and worked with each client directly.

EDUCATION

User Experience Research and Design, University of Michigan

Accessibility (How to Design for All), Interaction Design Foundation (IxDF)

Bachelor's Degree in Multimedia Design, Universidad Nacional de La Plata

LANGUAGES

English: Professional working proficiency | **Spanish:** Native

SECTORS & CLIENTS

- **Cloud & Developer Platforms:** Mercado Libre (Fury) | **Film Production Finance:** Conduit (Netflix, HBO and Starz productions)
- **Enterprise SaaS, Governance & Compliance:** Diligent (Policy Manager, used by Salesforce and Cisco)
- **PropTech & Fintech:** SFR3 | **AdTech & Events:** Edge226, Propelify
- **Energy & Utilities:** Edelpap | **Health:** Bagó | **Industry & Construction:** Loma Negra, Pisopak

SKILLS

- **Design:** Product Design, UX/UI Design, Human-Centered Design, UX Strategy, Interaction Design, Information Architecture, Wireframing, Rapid Prototyping, Responsive Design, Data Visualization, Design Systems, Design QA, Error Handling, UX Writing
- **Research & Accessibility:** User Research, User Interviews, Personas, Usability Testing, Card Sorting, Heuristic Evaluation, Heatmaps, Accessibility (WCAG 2.1 AA)
- **AI:** Generative AI, AI Workflows, AI Agents (Gemini, ChatGPT, Claude), Figma Make
- **Product & Collaboration:** Product Strategy, Stakeholder Management, Cross-functional Collaboration, Client-Facing Communication, DesignOps, Agile, Remote Collaboration, Team Building
- **Domains:** B2B SaaS, Developer Experience (DX), Developer Platforms, PaaS, Governance & Compliance, Fintech, E-commerce
- **Tools:** Figma, Optimal Workshop, Maze, Amplitude, Jira, Confluence, Adobe Creative Suite | **Technical:** HTML, CSS, JavaScript, React (basic), Frontend Logic, Git
